Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 2, 7, 10, 15, 16, 18 and 23-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gray (3,772,203) of PTO-1449 in view of Marchesi et al. (6,682,726 B2) and further in view of Schmitt (3,866,800).

Applicants' remarks regarding the prior art (Gray in view of Schmitt) did not teach or suggest the newly added element of the saturated aliphatic hydrocarbon with the two separate components for a post-foaming shave gel product are not persuasive since a new secondary reference, Marchesi et al. (6,682,726 B2), teaches volatile self-forming agent comprising a hydrocarbon or halohydrocarbon having a boiling point in the range of -20°C to 40°C (see column 2, lines 60-65 to column 3, lines 1-12) for post-forming is old and well-known in the art. Note the same column 2, lines 60-65 to column 3, lines 1-12 discloses the preferred self-foaming agents are selected from saturated aliphatic hydrocarbons having 4 to 6 carbon atoms, such as n-pentane, isopentane, neopentane, n-butane, isobutane, isobutane, and mixtures thereof.

Again, one of ordinary skill in the art would have been motivated to prepare a post-forming gel composition comprising water, surfactant, self-foaming agent in a container/dispenser wherein a chemical reaction incident to the mixing of the reagents provide exothermic heat and wherein the chemical reaction is between a thiosulfate and hydrogen peroxide.

The rejection made under 35 USC 103(a) is adhered to.

Claims 1, 2, 7, 10, 15, 16, 18 and 23-40 are not allowed.
